

Residential solutions

Who?

- Energetix is a specialist renewable energy installer established in Singapore, renowned for its **pioneering** expertise and team experience spanning 28 years, **engineering excellence** and a **strong track record** with over 200 residential projects completed and counting.
- We create **effective**, clean energy solutions that ensure a **high return on investment** and **long-lasting** energy supply. With an integrated approach, we work closely with investors, project developers and homeowners who want to ensure their solar PV power plants are reliable and profitable, providing innovative and customised solutions delivering optimal performance for homeowners.

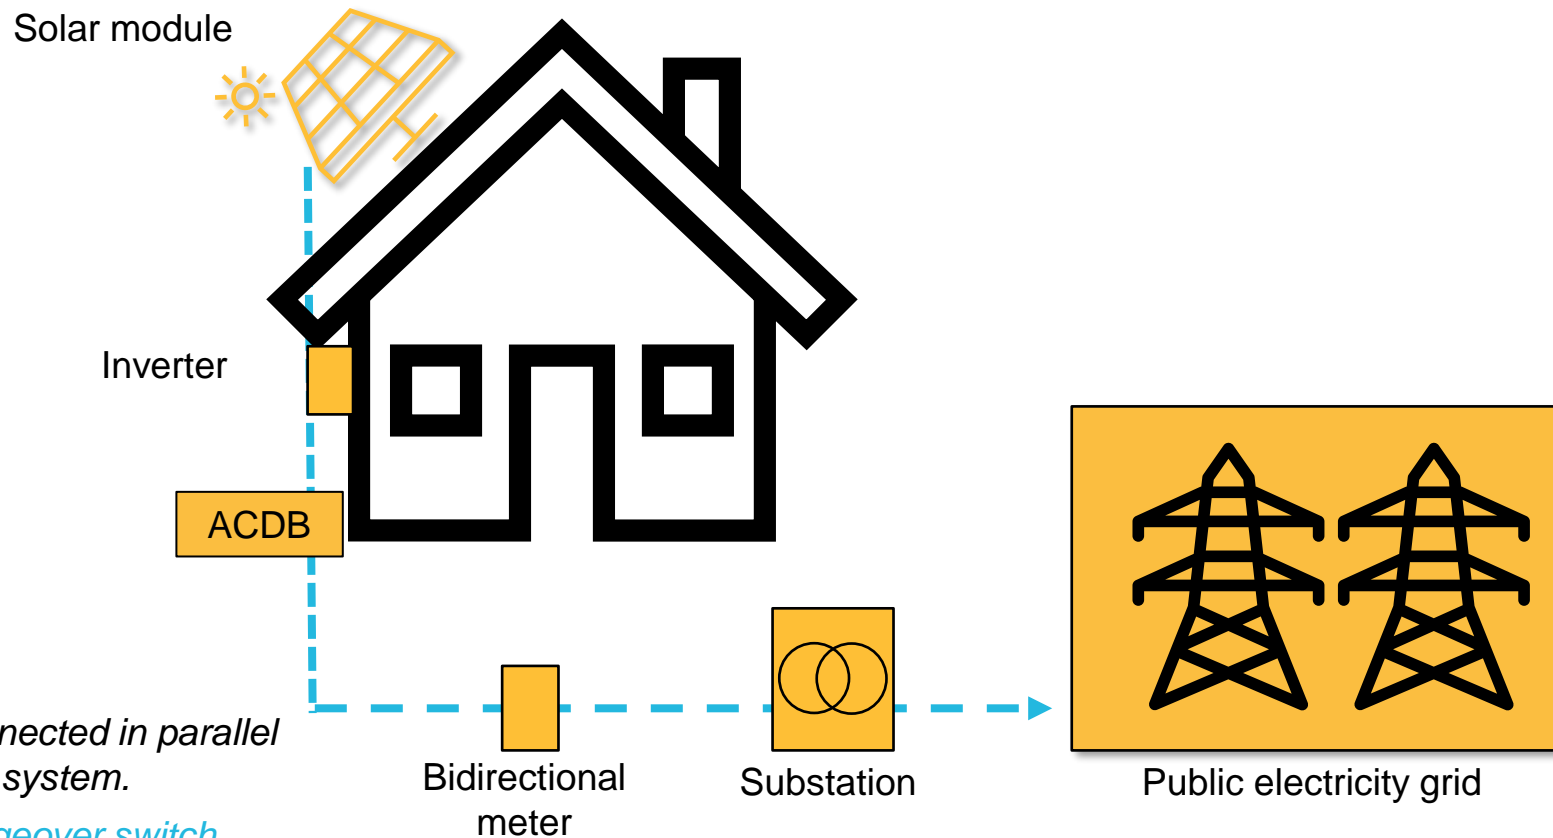

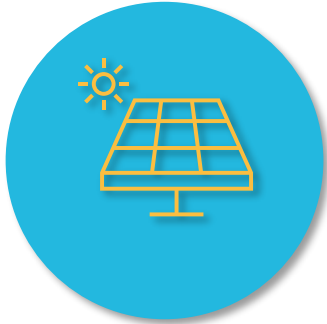

How?

How it works

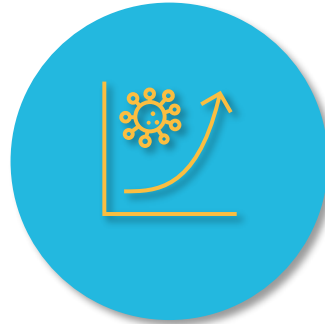

- PV electricity is consumed in-house.
- Excess PV electricity is exported and sold to the grid.
- The grid supplies any shortfall not met by the PV (especially at night).

How PV systems earn you \$\$

- Residential rooftops can fit between **10 to 120 kWp** PV system.
- Well-exposed roofs (without shade from nearby houses or trees), can generate 1'250 to 1'300kWh/kWp/year.

- PV energy is used immediately, saving on electricity bill and excess is SOLD to SPPG.
- Homeowners can expect payback periods of **four to six years***.
- Savings range from SGD 300 to SGD 3'900 per month*.

- Built with engineering excellence for long-lasting high performance, Energetix PV installations have an extremely long design lifespan of up to 30 years. Our PV systems have been installed since 2015.

* Based on estimated landed residences rate of return, subject to electricity tariff and individual consumption

Why Energetix ?

- Pioneer solar energy specialists

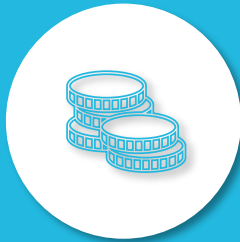

Proven track record of professional engineering excellence and optimised solutions, Energetix maximises ROI delivery for owners. Over 100 residential systems installed and counting, with multiple references from Clients.

- Full design, installation & maintenance

We design and install your rooftop PV system and ensure that it is commissioned according to local codes and requirements. We provide monitoring and maintenance solutions to keep your PV system in tip-top condition.

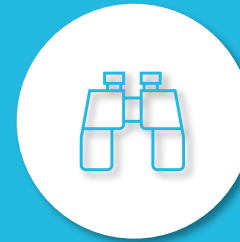

■ Endless value

We tailor our design to every rooftop, optimised for aesthetics, performance and reliability.

Our competitive pricing and best value for homeowners, deliver solar PV solutions that continuously deliver high performance for years to come.

■ Data-driven

Over 100 residential sites are under monitoring by Energetix. As such, our ROI is based on actual PV system performance. We provide monitoring and maintenance services to ensure long-term performance of your PV system

Residential project references

Reinforced concrete

43 kWp, WHP11

13kWp, Ocean Drive

22kWp, Faber Park

16kWp, Moonbeam Walk

Metal low / medium / steep tilt

56kWp, Ewart Park

122kWp, District 9

20kWp, Burnfoot Terrace

24kWp, Sunset Heights

70kWp, Astrid Hill

30kWp, Carmen St.

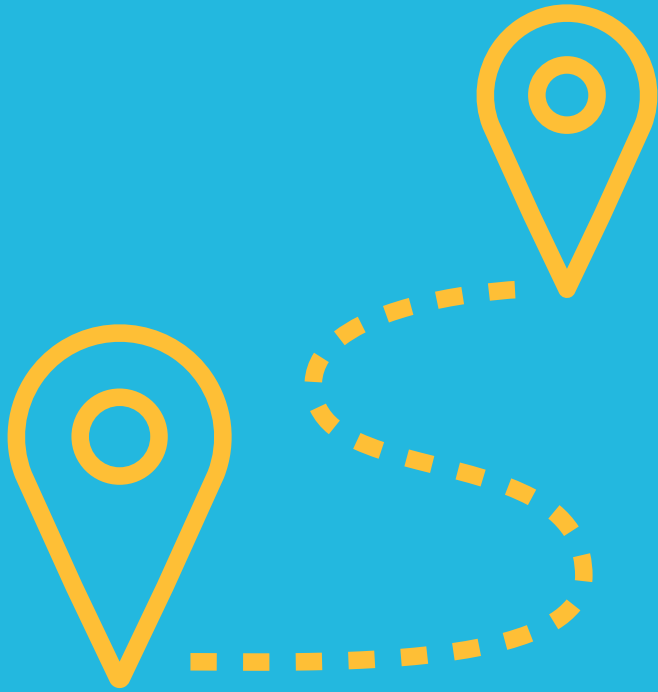

41kWp, Third Avenue

56kWp, Rebecca Road

Getting started

Retrofit on existing house

- Site address
- Building drawings showing dimensions
 - Roof plan view
 - Section and elevation views
 - Location of MSB and sub-DBs
 - Electrical single line diagram
- Electricity consumption data
 - Recent bills, showing kWh consumed, and tariff

New-build, renovation or A+A project

- Site address
- Architectural plans (AutoCAD is best, else pdf), 3D views
 - Roof plan view
 - Section and elevation views
 - Location of MSB and sub-DBs
 - Electrical single line diagram
- Schedule
 - When is TOP?
 - When is roof ready to install PV?
 - When is electricity connected?

ENERGETEX
ENDLESS ENERGY
